

UbuntuSure Insurance - Underwriting Guidelines

Risk and Underwriting Guide | Demonstration Document

1. Purpose

These guidelines describe simplified underwriting and risk rules used for the portfolio demonstration.

2. Risk Levels

- Low risk: customers with a stable policy history and no recent claims requiring manual review.
- Medium risk: customers with moderate claim activity or policies with higher insured values.
- High risk: customers or claims that meet one or more enhanced-review conditions.

3. High-Risk Review Conditions

- A claim above R100,000 is automatically referred for high-risk review.
- Three or more claims within 12 months trigger additional review.
- A claim submitted after the normal 30-day submission period may be referred for manual review.
- A high-risk classification means the case requires human assessment; it does not mean the customer has committed fraud.

4. Coverage and Premiums

- Coverage amount is the maximum insured amount recorded for the policy in this demonstration system.
- Premium is the recurring amount charged for the policy.
- Higher coverage does not by itself mean that a customer is high risk.

5. Responsible Use

Automated indicators should support human decision-making. Final underwriting and claims decisions should not be based solely on an AI-generated answer.

Portfolio note: This is fictional demonstration content created for an AI/RAG portfolio project. It is not an actual insurer policy or legal document.
